Das Problem der US Institutionen
The 15th Century Book Trade Project
Material Evidence in Incunabula (MEI)

MEI is a database specifically designed to record and search the material evidence (or copy specific, post-production evidence and provenance information) of 15th-century printed books: ownership, decoration, binding, manuscript annotations, stamps, prices, etc. MEI is linked to the Incunabula Short Title Catalogue (ISTC), provided by the British Library, from which it derives the bibliographical records, and it allows the user to run combine searches of bibliographical records (extracted from ISTC) with copy specific records.

Uniquely, every element recorded (a certain style of decoration or binding, a manuscript note, etc.) is treated as a valuable clue for provenance, therefore it can be geographically located and chronologically dated. This enables tracking the movement of books across Europe and through the centuries.

Material Evidence in Incunabula

Every item of decoration (a certain style of decoration or binding, the date of a manuscript note, etc.) is treated as a valuable clue for provenance, therefore it can be geographically located and chronologically dated. This enables tracking the movement of books across Europe and through the centuries.
